SKILLS TECHNICAL

- Java
- Python
- C++
- Go
- TypeScript
- Git
- Linux
- Windows

PERSONAL

- Problem Solving
- Planning
- Organisation
- Leadership
- Responsibility
- Communication
- Diligence
- Creativity

HOBBIES AND INTERESTS

- I enjoy hiking- in 2026 I completed Mount Kilimanjaro and raised over £3,000 for Teenage Cancer Trust in the process. I've also done the Yorkshire Dales 3 Peaks and have hiked Scafell pike and Snowdon (hoping to do Ben Nevis too soon!)
- I am greatly interested in and motivated by coding and have created many projects from scratch. I infrequently take part in game jams, and it's my dream to one day publish my own video game (check out my portfolio! www.joe-robson.com)
- I regularly go to the gym to stay in shape and play football to keep fit, and I'm a Nottingham Forest fan.

I am a polite, confident and pro-active person looking to become a **full-stack software engineer** after I complete my Computer Science degree at **Lancaster University**. I am reliable, self-motivated, and good at taking responsibility to get the job done. I have a passion for programming and will do whatever it takes to get a working solution for any problem thrown at me.

EXPERIENCE

June – September 2026

SOFTWARE ENGINEER (Summer Intern) *BAE Systems*

- Gained invaluable experience working within the ILAS team for BAE Systems.
- Worked full-stack, using Typescript and Golang to create an improved version of the team's debug tool over summer, which is in deployment now.
- Learnt both languages on the job, took part in bi-weekly sprint planning and made sure I delivered on my goals by the end of the experience.
- Developed public speaking skills as I regularly had to present my progress in the end-of-sprint demo sessions, and answer questions on the progress of the development.
- Working within a massive codebase in conjunction with lots of other developers, so really improved my knowledge of Git and best practices with version control.

December 2025 – January 2026

INTERN *Ringmind*

- Worked as an intern for Bron Szersynski for a month, fixing bugs and adding functionality to Ringmind: a planetary ring simulator.
- Gained great experience working on a project written by a number of different people with very varying coding experience.
- Improved my ability to read and understand other programmers' code, as I had to quickly familiarise myself with how the program flowed to be able to fix problems.
- Communicated with Bron frequently, meeting and discussing options in tackling certain bugs or implementing new features.

February - March 2025

TELEPHONE FUNDRAISER *Lancaster University*

- Telephone fundraiser in Lancaster University's annual telethon, fundraising for the Lancaster University Opportunity Fund.
- Part of a team of callers that raised over **£160,000** for students from weaker financial backgrounds, enabling them to attend higher education.
- Smashed the campaign's initial **£60,000** and became a part of Lancaster University's best ever fundraising team.

EDUCATION

2027 (In Progress)

MSci Hons Computer Science

LANCASTER UNIVERSITY, Lancaster

- Includes a first year minor in Mathematics
- Completed multiple individual and group projects

2024

A-Level

PETER SYMONDS COLLEGE, Winchester

- Computer Science A*
- Biology A*
- Mathematics A

2022

GCSE

TESTBOURNE COMMUNITY SCHOOL, Whitchurch

Achieved all 7s and above, including 7x 9s (in Computer Science, Maths, Biology, Chemistry, Physics, English Language and History).
